
Dang Ngoc Hung

Front-end Developer

CONTACT

- **Fullname:** Đặng Ngọc Hưng
- **Email:** hungitforwork@gmail.com
- **Phone:** 0859550557
- **Github:** <https://github.com/Himz-Hung>
- **Website:** <https://himz-website.vercel.app/>
- **Birth:** 14/11/2003

SUMMARY

- Front-end Developer specializing in ReactJS and TypeScript, experienced in developing enterprise and client-facing web applications. Skilled in building reusable component systems, integrating RESTful APIs, managing complex application state, and optimizing performance for scalable products. Comfortable collaborating with cross-functional teams in Agile environments and delivering production-ready solutions from requirement analysis to deployment.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS.
- **Frameworks/Libraries:** ReactJS, Angular, MUI, Ant Design, TailwindCSS.
- **State Management:** Redux Toolkit, Redux Thunk, React Query (TanStack Query).
- **Tools:** Git, Docker, Vite
- **Authentication:** JWT Authentication, Role-Based Access Control (RBAC)
- **Architecture & Optimization:** Custom Hooks, Code Splitting, Lazy Loading, Performance Optimization.
- **Others:** RESTful APIs, Responsive Design, Agile/Scrum.
- **Basic Knowledge:** NodeJS, MongoDB, Firebase.

EDUCATION & CERTIFICATION

- **University:** Information Technology Bachelor's Degree – FPT University (2021 – 2025)
GPA: 8.09 / 10 (3.3 / 4)

Work Experience

2024 – Now

- **Freelance Front-end Developer**
- **Projects & Achievements:**
 - Developed and delivered multiple web applications including Lucky Wheel event platform, Excel processing system, and document management system.
 - Built responsive user interfaces using ReactJS, TypeScript, and modern UI libraries.
 - Developed reusable components and optimized frontend architecture for better maintainability.
 - Integrated RESTful APIs, handled data processing workflows, and managed application state using Redux.
 - Implemented features such as file upload/download, data processing, form handling, and interactive UI experiences.
 - Collaborated with clients to analyze requirements, improve user experience, and deliver production-ready solutions.

2023 – 2024

- **Company:** FPT Software Quy Nhon
- **Role:** Front-end Developer
- **Achievements:**
 - Developed and maintained enterprise web applications using ReactJS and TypeScript for overseas clients.
 - Built reusable UI components, reducing duplicated code and improving development efficiency.
 - Integrated REST APIs and optimized data handling for better application performance.
 - Collaborated with backend developers and participated in Agile/Scrum development cycles.
 - Delivered production features through code review and team collaboration.

Projects & Professional Experience

PROJECT: Booking Platform **August 2025 – January 2026** **Developer**

Project Description: A web-based booking platform developed for an overseas client. The system allows users to search, book, and manage services with subscription-based access and integrated payment features. The project focuses on data security, performance optimization, responsive design, and a scalable front-end architecture for real-world users.

Responsibilities:

- Built responsive UI using **ReactJS, Vite, TypeScript, Tailwind**
- Developed scalable and reusable component architecture
- Managed state using **Redux Thunk**
- Implemented authentication & role-based access control
- Optimized performance and improved UX across devices
- Collaborated with remote team and client

Technologies Used:

- ReactJS, TypeScript, Redux, Axios, TailwindCSS, Vite.

PROJECT: Web Management System – Japanese Travel Agency
Developer

Project Description: A web-based management system developed for a Japanese travel agency to manage tours, customers, and bookings. The system was part of a real-world enterprise project for a foreign client.

Responsibilities:

- Developed reusable UI components using **ReactJS & TypeScript**
- Integrated RESTful APIs and handled async data
- Collaborated with backend team (.NET Core, SQL Server)
- Participated in Agile (Scrum), daily stand-ups, and code reviews
- Fixed UI/logic bugs and improved application performance
- Developed **30+ reusable React components** using TypeScript and SCSS.
- Integrated **20+ REST API endpoints** for customer, booking, and tour management.
- Improved UI responsiveness across desktop and mobile devices.
- Fixed critical UI bugs and optimized rendering performance.

Technologies Used:

- ReactJS, TypeScript, SCSS, .NET Core, SQL Server, Docker, AWS

PROJECT: FAMS - Face Attendance Management System
March 2025 – May 2025
Front-End Developer / Full-stack Contributor

Project Description: A cutting-edge automatic attendance system using facial recognition technology on the Jetson Orin platform, integrated with a web application (Responsive for Mobile Devices) to manage school attendance efficiently.

Responsibilities:

- Developed web UI using ReactJS + TypeScript
- Integrated attendance APIs and real-time data updates
- Worked with backend (NodeJS, Python, MongoDB)
- Deployed system using Docker & docker-compose
- Designed system structure & participated in requirement analysis

Technologies Used:

- ReactJS, NodeJS, Python, MongoDB, PostgreSQL, Docker

PROJECT: Student Management System
Jan 2023 – February 2023
Developer

Project Description: A student management application developed with ReactJS during my second year of study. The project focuses on managing student data and providing an intuitive UI for CRUD operations.

Responsibilities:

- Developed reusable React components and implemented state management
- Integrated RESTful APIs to fetch and update student data
- Implemented form validation and error handling
- Improved UI/UX to ensure smooth user interactions
- Managed source code with Git and collaborated via GitHub

Technologies Used: ReactJS, JavaScript (ES6+), HTML5, CSS3, Git, GitHub.
